INDUSTRIALS GET PLAY IN MARKET

Course of Prices Irregular but Features of Strength Predominate in This Division of List.

New York, June 14.—Although there was more action than real general motion in the stock market today, the fairly well sustained animation of the dealings evinced a continued interest in the position and prospects of the share list. Prejudiced observers dwell on the obvious professionalism of the trading, but the same complaint has been made for several weeks during which the market has accomplished a gradual but distinct advance in the general level of quoted values.

The season could be described as one which effected no qualification of the prevalent aspects of strength which have characterized the market lately. At intervals there were brief displays of rising firmness in portions of the railroad list, but rails, as a whole, seemed to be restricted by the uncertain stage of controversy with the railway labor union.

The principal business of the day was done in the industrial department, where the course of prices was irregular, but with features of strength predominating. American Beet sugar was conspicuously on the rising side, and there were signs of more aggressive firmness in the copper group led by Inspiration.

The government's weekly report showed that even yet crop weather had not settled into a generally favorable state for the season. The regular reviews of the iron and steel trade reported the renewal of export inquiry on so large a scale, as to insure support for the price level of steel products. The gold movement from Canada was increased to \$31,425,000.

COTTON MARKETS.

New York, June 14.—The trading in cotton was light, with values showing a little further decline. The early selling movement was partly due to the weather map, which showed good conditions for the day, and there was some disappointment at the cables. The trade in spot cotton on the outside has been quite limited of late, while arrivals were liberal. Liverpool buying in this market was small, and had but limited influence. This buying seems to be the undoing of straddle accounts, due to the drop in the high rate of 55 per 100 pounds in 5 1/2.

Concessions have been made in nearly all articles, and in gain the decline in freight from the high level has been more than 50 per cent. Spot cotton is dull and only about steady. Sales have fallen off materially at the South the past few days.
